

SMART FARMER-IoT ENABLED SMART FARMING APPLICATION

TEAM ID: B1-1M3E

ABSTRACT:

India is agriculture sector, on either sides, is losing ground every day, affecting the ecosystems output capacity. In order to restore vitality and put agriculture system necessitates a great deal of upkeep, knowledge, and oversight. The IoT is a network of interconnected devices that can transmit and receive data over the internet and carry out tasks without human involvement. Agriculture provides a wealth of data analysis parameter, resulting in increased crop yields. The use of IoT devices in smart farming aids in the modernization of information and communication. For better crop growth moisture, mineral, light and other factors can be assumed. This research looks into a few of these characteristics for data analysis with the goal of assisting users in making better agriculture decision using IoT. The technique is intended to help farmers increase their agricultural output.
